## Do you have plans to introduce new tube materials in production during 2022?

Consumers concern toward the environment is growing, and so is ours. The EU Packaging and Packaging Waste Directive (PPWD) is a centerpiece of EU policy, aimed at ensuring a sustainable future for packaging. The sustainable development, preserving natural resources and systems, while meeting development goals of economies, is given top priority.

**Norden Tube Lab** is the Excellence Centre set up in Norden since many years. In the tube lab, we test innovative and sustainable tube materials, including those made from PCR materials, to determine if their **pressure resistance and durability** are adequate for our machines. Your customer service representatives will be glad to help if you have plans to introduce new tube materials in production during 2022. *Without effort, nothing great was ever achieved.*

**Your offer:**

**Free of charge test for new sustainable tubes at Norden Tube Lab!\***
