Corner Trimming Unit & Wide Seal Unit

Benefits your production, benefits your business

With our Corner Trimming Unit you can efficiently produce attractive, easy-to-handle round corners. Our Wide Seal Unit allows you to give an edge to the design. The wide seal can also utilize a hole punch to make it possible to hang the tube from a peg, achieving solutions for space-saving yet strong exposure.

The spring-loaded, self-adjusting knives in the unit have an increased lifespan, keeping cuts clean and precise for a longer time. Decreased maintenance stops, of course, also mean greater production output, and lower cost.

A comprehensive unit

Our Corner Trimming Unit and our Wide Seal Unit can be applied to most Norden tube fillers equipped with linear trimming stations. If you are currently using a rotary knife, the first step is to replace it with our Linear Trimming Station Unit.

Our service technician can quickly install the Corner Trimming Unit or Wide Seal Unit and fine-tune the machine. Your production will be up and running within a day.

The unit includes:

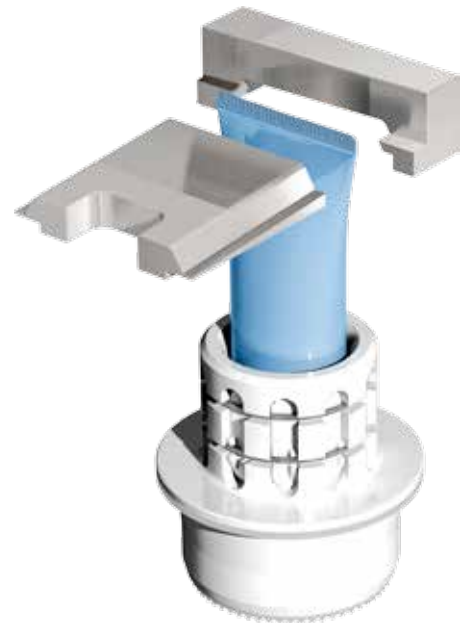

- Spring-loaded cutting and sealing tools
- When required: HA sealing and cooling ring

Our Corner Trimming Unit and Wide Seal Unit have been tried, tested and approved by Norden for performance and quality. When installed, they are integrated to work in unison with the other functions of the machine.

With you for the long run

Norden is committed to providing evolving functionality of your filling systems. Through our quick hardware supply, reliable service and maintenance, and extensive global reach and local presence, we can constantly enhance your productivity according to your needs.
