

LOWER PRE-CLOSING JAWS KIT

a coesia company

Shape up your tube preforming with the lower pre-closing jaws kit

LOWER PRE-CLOSING JAWS KIT

Some tubes tend to form asymmetrically, creating a cavity just below the sealing area. This may cause aesthetic defects on the tubes. Now you can start using the lower pre-closing jaws with snap-on tails. This kit includes one of the below:

- 1 pair of lower pre-closing jaws for standard coding station *or*
- 1 pair of lower pre-closing jaws with 1-sided quick release *or*
- 1 pair of lower pre-closing jaws with 2-sided quick release

The kit also includes a set of snap-on tails. The snap-on tails create a distinct preforming and the tube cavity can be avoided.

IMPROVE SEALING QUALITY & TUBE SHAPE

When using the lower preclosing jaws with snap-on tails in production you may alter the height and angle of the tails depending on the size and type of tube.

BENEFITS

- Use the snap-on tails for a better pre-forming, which can help achieve better looking tubes.
- Save time on adjustments, instead choose between a number of options depending on characteristics of the tube.
- User friendly concept: easy to apply and remove.
