

PRESSURE EQUALIZING CYLINDER UNIT

a coesia company

Fill tubes with extremely high accuracy

Our Pressure Equalizing Cylinder Unit upgrades your machine with premium parts that make it possible to feed your product into tubes with extremely high accuracy. Minimizing spread and getting a uniform distribution – even with multicolour, sensitive, high-viscosity products – enables you to get more out of your production. The Pressure Equalizing Cylinder Unit's new design with a separate air cylinder means no air is in contact with your product.

BENEFITS

- Very high accuracy
- Minimizes spread in filling weight
- Efficient, even dispensing
- Stable and precise

out of **tubes**

Pressure Equalizing Cylinder Unit

Benefits your production, benefits your business

The Pressure Equalizing Cylinder Unit is customized for your machine. Before selecting the optimal parts, we conduct a complete review of your particular machine with regards to the products in mind.

Filling an extra gram or two just to be on the safe side of filling weight means that you are giving away a lot of money over time. Our Pressure Equalizing Cylinder System increases accuracy, which allows for more efficient dispensing of the product. Even filling advanced multicolour products is a stable and precise process.

A comprehensive unit

Our engineering department assesses your particular machine, and designs and selects suitable parts to run the system. Exchanging parts and conducting test runs varies from machine to machine.

Our Pressure Equalizing Cylinder Unit has been tried, tested and approved by Norden for performance and quality. When installed, it is integrated to work in unison with the other functions of the machine.

With you for the long run

Norden is committed to providing evolving functionality of your filling systems. Through our quick hardware supply, reliable service and maintenance, and extensive global reach and local presence, we can constantly enhance your productivity according to your needs.
