Tube Print Orientation Unit

Benefits your production, benefits your business

The Tube Print Orientation Unit aligns the tubes in the correct position so that final sealing is according to tube decoration. It always rotates the tube at least one full cycle. The photocell checks for the print mark, and stopping is possible in any position through 360 degrees.

The upgrade includes support of both PNP and NPN photocells. To change speed, simply press the button. The precision allows you to run larger tubes and at higher speeds, and thus meet broader customer requirements in the future.

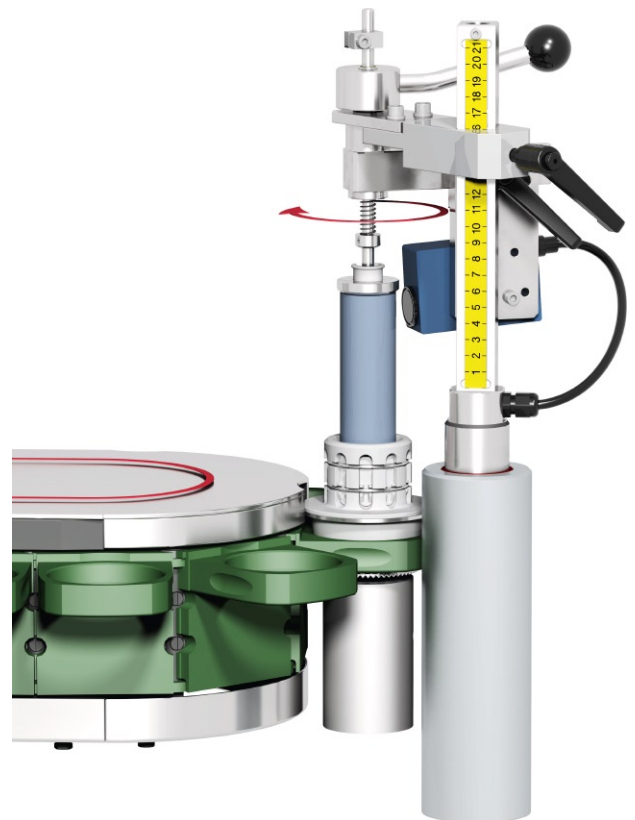

A comprehensive unit

Our service technician will visit you in time for the installation. Exchanging parts takes a day, additional fine-tuning as required.

The equipment includes:

- Drive unit
- Stepping motor
- Photocell with "Teach-In" function

Each part in the Tube Print Orientation Unit has been tried, tested and approved by Norden for performance and quality. When installed, it is integrated with our control system and works in unison with the other functions of the machine.

With you for the long run

Norden is committed to providing evolving functionality of your filling systems. Through our quick hardware supply, reliable service and maintenance, and extensive global reach and local presence, we can constantly enhance your productivity according to your needs.
